Indications:

Electrolytic and energy supplement, with easy and fast assimilation; it has trace elements, vitamins and amino acids that support the athlete's performance.

It is a restorer of internal medium for the replacement and/or the maintenance of lost electrolytes and energy during the exercise, training or competitions, dehydration, diarrheas, convalescences, loss or accentuated diminution of appetite, etc.

Target species:

Equine, bovine, ovine, caprine and large birds.

Route of administration:

Administrate orally according to the recommended dose.

Dose every 4 to 6 hours prior to exercise. The dose may be repeated during the exercise or after it, according to the veterinarian's discretion.

The animal should have access to abundant, clean and fresh water.

Dosage:

Large animals: minimum recommended dosage: 5 g every 100 kg of live weight.

Small animals: minimum recommended dosage: 1 g every 20 kg of live weight.
