

L – CARNITINA 10%

Product basic composition:

L – Carnitine 10 g

Excipients q.s.ad..... 100 mL

Indications:

L-Carnitine improves performance and resistance as well as preventing muscle fatigue. It has an important role in energy metabolism, since it is responsible for transporting fatty acids through the membrane of the mitochondria to be used as energy for muscle contraction. The combination of L-Carnitine with training promotes changes in the muscle skeletal, in this way is favored a better muscle regeneration after exercise, a lower formation of free radicals produced by physical stress and better cellular integrity, improving the action of hormones such as testosterone and growth hormone. Indicated in the physical preparation of high performance horses, subjected to stress, growing, convalescent or with chronic fatigue. Improves the performance of muscle mass.

Target species:

Equine.

Route of administration:

Oral route, directly in the mouth or mixed with drinking water.

Dosage:

10 to 50 mg/kg of weight/daily. Recommended dose: 50 ml – 100 ml/daily.
