

NO BLEEDING

Injectable solution

Formula:

Each 100 mL contains:

Carbazochrome..... 1.0 g

Excipients q.s.ad..... 100 mL

Indications:

No bleeding is a potent hemostatic, capillary, vasotropic drug that suppresses the capillary increased permeability and increases the capillary resistance which determines a reduction of bleeding time. It is indicated for prevention and treatment of bleeding due to different causes such as surgical dental extractions, trauma, surgery, etc. Additionally, the product has furosemide to treat pulmonary hemorrhage induced by exercise in horses. It also acts as supportive treatment in rodenticide poisoning. It acts on hhematuria, melena, hematemesis, hemorrhagic metropathy, purpuras, gingival bleeding or other indication according to veterinarian's discretion.

Target species:

Equine, canine and feline.

Route of administration:

Intramuscular or subcutaneous administration, with aseptic measures for injectable application.

Dosage:

It is recommended 0.6 mL every 20 kg of body weight (0.3 mg/kg), twice daily for 3 – 5 days or according to veterinarian's discretion.
